Perspectives on Perseverance during COVID-19

At times when you hear of people feeling tired of Covid, it is essential to remain passionate and resolute in defeating this threat to humanity. We must remain committed and relentless in reducing the spread of coronavirus in all its variants. Scientists have developed a vaccine defense to shield us and our community from coronavirus. Vaccinations are the next best step to defeat this pandemic. When opportunity knocks, make the right choice and get vaccinated. It is an unmeasurable benefit and privilege to live in a country where vaccinations are created, manufactured and swiftly rolled out while other countries have no vaccines to distribute let alone enough oxygen to treat those afflicted with Covid. Persons who are skeptical of vaccinations are proof that as Mark Twain once said "*I've found that **common sense ain't so common***".

While it is impossible to visualize the milestone of over 500,000 Covid deaths in the United States, we cannot look the other way and give up on containing the spread. A community steadfast in its fight against Covid, unwilling to lose a single person, will be scarred but undefeated when the disease is vanquished. History has shown that perseverance is a human trait that enables us to get through major challenges. It is important to remain resolute in defeating coronavirus. In our community, simple selfless actions like wearing a mask, washing your hands and keeping your physical distance from other will always be the right approach. At **Eastbrook Community** every individual should consider their right to make the right choice for the common good.

COVID-19 Antibody Testing

Healthchoice Chiropractic - 14 Eastbrook Bend, Suite 201

Dr. Noah Marchese and his team are proud to be offering COVID-19 antibody testing. The simple blood test is 100% covered by your insurance and will provide you with results from Labcorp in 3 days. Two antibodies are tested for: IgM and IgG.

IgM antibodies are the first antibodies produced during infection. This would indicate that an individual has an active infection.

IgG antibodies are the last antibodies to be produced and confer long term immunity. Once an individual has IgG antibodies, it is unlikely to be infected by the same strain in the future.

Come see Dr. Noah and the team to get your antibody test in his newly renovated office at 14 Eastbrook Bend, Suite 201 or contact [Healthchoice Chiropractic](#) directly to set up an appointment!
